

Hello! This is a new release 4.
 This is a separate file.
 They said [1].

sage: <code>r,B = var('r,B')</code>	1
sage: <code>f = (x*r*B)/((1-x)^2 * (1-x*r))</code>	2
sage: <code>f.partial_fraction(x)</code>	3

$$-\frac{Br^2}{(r^2-2r+1)(rx-1)} + \frac{Br}{(r^2-2r+1)(x-1)} - \frac{Br}{(r-1)(x-1)^2}$$

Sage can compute $1 + 1 = 2$.
