

Hello! This is a new release 4.
 This is a separate file.
 They said [1].

```
sage: r,B = var('r,B') 1
sage: f = (x*r*B)/((1-x)^2 * (1-x*r)) 2
sage: f.partial_fraction(x) 3
```

$$-\frac{Br^2}{(r^2-2r+1)(rx-1)} + \frac{Br}{(r^2-2r+1)(x-1)} - \frac{Br}{(r-1)(x-1)^2}$$

Sage can compute $1 + 1 = 2$.
